

## MODEL 5073NS Series Station Interrogation and Control Software

### General Description

HydroLynx Model 50386 station data can be received, interrogated, and controlled over serial, telephone, or radio networks with the 50386 Interrogation/Control software. Multiple Model 50386 CTUs for separate radio networks can be managed by the NovaStar central station. Telephone modem dial up of Model 50386 stations as an alternate path is available. Wide area network data and message transmission and receipt over a 50386 network is supported. Remote Model 50386 setpoints, digital and analog controls and sensor management parameters can be examined, modified, and sent from the central station.

Data sent by Rigid or other Scada-type RTU over a serial line using the MODBUS protocol can be interrogated and controlled with the MODBUS Interface software.

Remote stations can be interrogated using telephone modems with the Modem Interrogation Software.

Satellite station data can be downloaded from a downlink station with the Satellite Downlink Interrogation Software.

### Ordering Information

5073NS-50386 .....HydroLynx 50386 Interrogation/Control Software  
5073NS-MOD .....MODBUS Interface Software  
5073NS-INT .....Modem Interrogation Software  
5073NS-SAT .....5400 Satellite Transmitter Downlink Software
